

phase2 Water Purifier for hotels & restaurants

Are your guests drinking the best water?

Shouldn't you be providing the best for your guests & patrons? Wouldn't it be nice to reduce your costs at the same time? Forget buying bottled water, it's too expensive! If you already purify your own water, your system could be energy inefficient, wasteful of water, or ever-hungry for consumables and replacement filters.

Luckily there's *phase2*. Using the technology of large water purification systems, *phase2* brings efficiency to a smaller scale - to your hotel or restaurant. Your benefits? Reduced costs and consistent high quality, great tasting water. Imagine your hotel or restaurant saving thousands of dollars every year. You can do it! Go on, we'll help you make the change...

Consistent water quality, best taste.

Filters, reverse osmosis membranes and deionizers deliver variable, degrading water purity as time goes on. They become clogged or weakened, or worse, bacteria colonies can begin to grow on the filter media.

You avoid these hassles with the vacuum distillation technology of *phase2*, because distillation physically separates pure water from contaminants. When you provide consistent high purity water, you know your patrons and guests are getting the best water possible. You really can taste the difference, and see your health & wellbeing improve.

Cost-efficiency saves money.

Normal distillers guzzle thousands of \$ worth of electricity and water each year. Deionizers, filters and reverse osmosis systems chew up money with expensive cartridges and membranes continually needing replacement.

If you use delivered bottled water, add up your expenses—you may find it costs thousands of \$ each year.

phase2 could save you this money, because *phase2* uses just 14% of the electricity needed by a normal distillation system, and wastes 90% less water. It's thanks to the unique, built-in energy recycling system. *phase2* also cuts through consumables and maintenance costs while extending lifespan using just a few inexpensive preventive filters.

Reliability and low maintenance.

You can count on *phase2*: it's built to last a lifetime, with a robust and durable design that sets it above the rest. Every unit must pass high quality standards, and is progressively tested during manufacture. A comprehensive, extended operational test is also carried out and must be passed flawlessly before each Australian-made unit is shipped.

phase2 follows a proven track record, with years of experience in the field. Almost no maintenance is required – *phase2* uses just a few inexpensive 'preventive' filters to protect the system, giving you peace of mind.

Where would you use *phase2*?

- Food & beverage preparation
- Water for bottle coolers
- Apartments & offices
- Premium water
- Table water
- Ice-making
- Other hospitality uses

More advantages of *phase2*.

- ✓ Easy PNP installation: Just plug it in, prime the tanks, and switch on.
- ✓ Walk away and forget about it. Automatic control takes care of itself - 24/7, 365.
- ✓ No accessories, pumps, or tanks to buy: all-in-one and self-contained.
- ✓ Modular system gives you a growth path with increased capacity is needed.

Extra reassurance.

- ✓ Strong, durable and lightweight. Aluminium frame & BHP Colorbond construction.
- ✓ Instant help always available. Lifetime phone or email support.
- ✓ Peace of mind. One year manufacturers warranty.

Case studies from the real world.

phase2 has done away with bottled water delivery at a leading tourist resort in Australia's Kakadu World Heritage National Park. Previously spending around \$30,000 p.a., the resort can now save thousands, and avoids the cost of delivery for bottled water. The *phase2* system purifies water stored in a nearby billabong, and unlike other systems, removes the natural yellow tanin colour of the billabong water, providing guests with pure, crystal clear drinking water.

Other case studies include the Royal on the Park Hotel, Brisbane Australia, who installed the predecessor of *phase2* several years ago. "Every year since, we have saved at least \$15,000." Go on, you can too...
