

phase2 Water Purifier for medical & dental

Are your autoclaves using the water they should?

Stop relying on your old distiller for autoclave feedwater. Distillers can be shamefully wasteful of electricity and water, can require intervention during their operating cycles, and always need cleaning or maintaining.

Imagine reducing your water costs, and saving thousands of dollars each year. *phase2* brings efficient technology to your medical or dental centre, to save electricity and water. *phase2* is low maintenance, and high reliability. What's more, *phase2* is truly automatic, 24 hours a day, 365 days a year.

It makes sense to reduce costs. Go on, we'll help you make the change...

Truly automatic and user friendly.

It's simple to install *phase2*. Just plug in, prime the tanks and switch on. Then you can walk away and forget it, thanks to the built-in electronic microprocessor control which allows true automation.

Unlike batch distillers, *phase2* uses real-time continuous processing, 24 hours a day, 365 days a year. There's no filling, emptying or shut-off to worry about – *phase2* takes care of itself, pumping water to your autoclaves and water faucets whenever required.

Should any problem arise, you can make a quick and easy diagnosis from the user-friendly colored diagnostic lights. For extra reassurance, *phase2* is covered with lifetime phone or email support.

Cost-efficiency saves money.

Normal distillers guzzle thousands of \$ worth of electricity and water each year. Deionizers, filters and reverse osmosis systems chew up money with expensive cartridges and membranes continually needing replacement.

phase2 uses just 14% of the electricity needed by a normal distillation system, and wastes 90% less water. It's thanks to the unique, built-in energy recycling system. *phase2* also cuts through consumables and maintenance costs while extending lifespan using just a few inexpensive preventive filters.

Reliability and low maintenance.

You can count on *phase2*: it's built to last a lifetime, with a robust and durable design that sets it above the rest. Every unit must pass high quality standards, and is progressively tested during manufacture. A comprehensive, extended operational test is also carried out and must be passed flawlessly before each Australian-made unit is shipped.

phase2 follows a proven track record, with years of experience in the field. Almost no maintenance is required – *phase2* uses just a few inexpensive 'preventive' filters to protect the system, giving you peace of mind.

Where would you use *phase2*?

- Rinse water for washing and cleaning
- Ultra-pure system feedwater
- Autoclave feedwater
- Glassware washing
- Other medical & dental processes

More advantages of *phase2*.

- ✓ Eliminate variation with the consistent, reliable water quality of *phase2*.
- ✓ No accessories, pumps, or tanks to buy: all-in-one and self-contained.
- ✓ Modular system gives you a growth-path when increased capacity is needed.

Extra reassurance.

- ✓ Instant help always available. Lifetime phone or email support.
- ✓ Peace of mind. One year manufacturers warranty.

Case studies from the real world.

Dental and medical centres make significant cost savings with *phase2*. Consumption of electricity and water is greatly reduced compared to traditional distillers, and *phase2* delivers better water quality. And being totally automatic, medical staff can get on with their jobs without worrying about their pure water. *phase2* is the best you can get...
