

## phase2 Water Purifier

# Be surprised...

Introducing the *phase2* water purifier, unlike anything you've ever seen before.

Tough, adaptable & efficient, the modular design provides you with the capacity you need. Each module provides 6 litres per hour, for a total system of 144, 288 or 432 litres/day.

Using vacuum distillation, a process traditionally found only in large water purification systems, *phase2* brings you efficiency, cost-savings, reliability, & consistent high-purity water...

- ✓ Australian made, 100% quality tested
- ✓ Lifetime phone or email support
- ✓ 1 year manufacturers warranty
- ✓ Modular design & growth path
- ✓ 85% less energy consumption
- ✓ *phase2* - brilliant thinking!

### Design, quality, efficiency, technology. A better water purifier...

#### :: Cost-efficiency saves money

Deionizers, filters, reverse osmosis systems & other water purifiers chew up money with expensive cartridges & membranes continually needing replacement.

*phase2* uses just 14% of the electricity needed by a distiller, and wastes 90% less water. *phase2* also cuts through consumables & maintenance costs while extending lifespan using just a few inexpensive preventive filters.

#### :: Truly automatic, user friendly

It's simple to install *phase2*. Then you can walk away and forget it, thanks to built-in electronic microprocessor control. Using a real-time continuous process, *phase2* automatically takes care of itself, 365 days a year.

Should any problem ever arise, the microprocessor helps you make an easy diagnosis. For extra reassurance, *phase2* is covered with lifetime phone or email support.

#### :: Reliability & low maintenance

*phase2* is built to last a lifetime, with a robust & durable design that sets it above the rest. Every unit is progressively tested during manufacture and must pass the highest quality standards.

*phase2* follows a proven track record, with years of experience in the field. Almost no maintenance is required—*phase2* uses only a few inexpensive 'preventive' filters to protect the system, giving you peace of mind.

#### :: Grows with your needs

*phase2* is designed as a modular system. Each BaseStation can support up to 3 modules. Buy upfront for immediate capacity, or buy extra modules in future, as your needs grow.

It's a growth path to help lower your capital expenditure. Only pay for the capacity you need, and add low cost modules when your consumption increases.

#### :: Consistent water quality

Filters, reverse osmosis membranes & deionisers deliver variable, degrading water purity as time goes on. They become clogged or weakened, or bacteria colonies can begin to grow on the filter media.

The vacuum distillation process in *phase2* avoids these problems, because distillation physically separates pure water from contaminants. *phase2* provides you with consistent high-purity water.
